

Customers are **already building** geospatial apps...

S&P Global Commodity Insights

Set out to solve a major challenge: efficiently rendering geospatial content while **scaling performance** and **reducing costs**.

1. **Eliminate** redundant **datastores** by maintaining geospatial tables in Databricks
2. Filter + cluster **massive datasets**
3. On-Demand aggregation using H3's hierarchy render **hyper-local** views up to **global** contexts

BEFORE – Architecture [partial]
